Forecast for Tuesday 19 Dec 2023

Weather: Showers across the region, most frequent and heaviest first thing in the morning and early evening. These heavy at times with risk of hail and lightning, and falling as snow above 600m. Strong to gale force westerly winds on summits. Brief dry, sunny intervals between showers.

Chance of cloud-free hill tops above 800m: Less than 20% morning and evening, chances improving to 40% during daylight hours.

Low cloud and visibility: Cloud height variable and fast changing, but seeing broken cloud bases at 600-800m in showers. Poor visibility in showers, but periods of excellent visibility in between.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View
Combination of strong winds, colder temperatures than the past few days, and frequent snow showers will give a severe wind chill. Making progress will be slow with a risk of being blown over.

Forecast for Wednesday 20 Dec 2023
Weather: A few snow showers in the early hours. A warm front will move east through the morning bringing some rain, briefly preceded by snow on the higher summits. The afternoon will be cloudy and very windy with rain at times, this rain lingering into the evening.

Maximum wind: West 35-40mph, gust 65mph on the highest summits.

Chance of cloud-free hill tops above 800m: Generally less than 10%, but some breaks may develop after dark in the cloud sheet more especially across the east.

Low cloud and visibility: Persistent rain or drizzle combined with widespread cloud bases 300-500m through the day will lead to poor visibilities

Temperature: **Glens:** Plus 02 Celsius rising to Plus 09 Celsius.
At 800m: Minus 01 Celsius rising to Plus 02 Celsius.
Freezing level: 800m in the morning, rising above the summits later.
